

Permits & Inspections Online 24/7

The Builders Millennium intuitive, web-enabled ePermit and ePermitPlus solutions expedite, organize and streamline the entire permit and inspection process and workflow. The ePermitting solutions allow homeowners and contractors to file permits, schedule inspections and obtain application status online. Town hall departments can process permit applications, acceptances, payments and final approvals via the web. Most simple permits that do not require plan review, attached supportive drawings or documentation are issued instantly, allowing work to get started immediately after printing an approved permit.

Automating processes in house and providing e-services to your constituents reduce project task lifecycles and assist in the “doing more with less” concept. Tasks that usually take weeks to complete now just take days to complete. Citizens are happy because they are completing projects on their time- not yours. Freeing this time up allows municipal staff more time to focus on other job functions, such as completing inspections.

The Problem

Homeowners, contractors and municipalities are trudging through this economic downturn with one thing in common- the need to do more with less. Everyone is taking on additional responsibilities and spending more time and money with fewer resources available.

- ❖ Homeowners are paying more money out of pocket for common necessities and facing an unemployment rate of over 9%.
- ❖ Contractors are trying to keep their head above water while having to lay off employees, decrease profit margins to stay competitive and seek out work in an economy with the tightest lending practices which have hindered construction development tremendously.
- ❖ Municipalities are facing major budget cuts which have led to layoffs. Continuing to operate with fewer resources and fewer employees to achieve the same output has created a large burden on the shoulders of the cities and towns.

The Solution

How do we work together to solve this problem? The answer is *automation*. Automation traditionally comes with a steep cost-until now. There is no better time than the present for municipalities to establish a partnership with Builders Millennium to achieve improved services for the citizens at a price you can't refuse. We are here to present a system that will organize and streamline the current arduous and archaic permits and inspections process; a beneficial solution for everyone doing more with less.

AUTOMATE | ORGANIZE | STREAMLINE

Key Features

- ❖ Quick implementation
- ❖ Intuitive and easy to use
- ❖ Fully customizable
- ❖ "To Do" lists and notifications
- ❖ Add project notes & comments
- ❖ Attach CAD drawings, digital drawings, images and other documents
- ❖ Full project tracking and management
- ❖ Accept online payments
- ❖ Simple permits issued immediately after payment is received
- ❖ Inspection scheduling on your time
- ❖ Work anytime, anywhere with an internet connection
- ❖ Work as a team without having to coordinate schedules
- ❖ Reporting and archiving capabilities
- ❖ Data security and backups
- ❖ Support and upgrades included
- ❖ Integrate with all EB2gov modules

Key Benefits

- ❖ Open for business 24/7, 365 days per year
- ❖ No software or hardware to install
- ❖ User friendly
- ❖ Easy sign up & installation; add new permits anytime
- ❖ Reduce phone calls and office traffic
- ❖ Speed revenue collection & increase cash flow
- ❖ Increase citizen awareness via traffic to the site
- ❖ Go Green- Reduce paper waste
- ❖ Information available when you want and need it
- ❖ Everyone stays connected throughout the entire process
- ❖ Maximize efficiency

Technical Specifications

Builders Millennium develops web-based applications using cutting edge technology. There are multi-level backup strategies for disaster response and recovery. Hosted on the latest cloud technology provides the necessary maximum uptime and safety.

❖ **Platform:** *Cloud Computing Platform- Azure Microsoft ASP.NET*

Provides municipalities with 99.9% guaranteed uptime (Microsoft's guarantee)

❖ **Database:** *Microsoft SQL Server 2008*

The database is Microsoft SQL 2008, or Microsoft SQL Azure Database, running on the cloud. The database is redundant/ fault tolerant, and therefore safer and more robust than keeping the data onsite. It would be possible for a municipality to have a local SQL database, however this will require setup fees (not included in the ePermit module)

❖ **Web Service:** *Microsoft's Internet Information Services (IIS) version 7*

❖ **Application Framework:** *Microsoft Silverlight*

Silverlight has a professional appearance and user interface consistency. Users will need to download Microsoft Silverlight and install prior to using the permit application. Silverlight is already installed on half of the PC's in the United States, according to online statistics.

Annual Service Plan, Training & Miscellaneous Options

The Builders Millennium Service Plan is designed to encompass all the services, support, training and quality products that our customers have come to expect and rely on.

The Plan ensures that you continue receiving all that Builders Millennium offers after your initial implementation/purchase by providing the latest product upgrades and prompt, professional support.

Annual Service Plan includes:

- The latest software upgrades
- Fast, courteous toll-free support
- Remote online support
- Unlimited email support
- Online seminars

Training Options:

- Online or by phone
- Online webinars
- Onsite Training (minimum 2 days)

Miscellaneous Options:

- Custom report writing
- Custom report design
- Custom form management
- Custom database maintenance
